

Head Bolt Kits - High Performance Series & Stainless Steel

By Automotive Racing Products (ARP®)

These stainless steel head bolts have a tensile strength of **180,000 psi** (just about 15% stronger than grade 8). The reduced head allows retorquing of cylinder heads without removing rocker arms or valve springs. Features include: Tapered wide area flanged head to provide superior distribution of force; Threads are rolled after heat treating to maximize strength. All head bolt kits come with hardened alloy washers that are chamfered and parallel ground to prevent galling while providing a totally flat mating surface. ALL KITS ARE FOR USE ON STOCK HEADS. High Performance Series bolts are made of chrome moly steel and heat-treated to a nominal rating of **170,000 psi**.

High Performance Series w/Stainless Steel outer rows				
	Hex	Price	12 point	Price
Small Block Chevy				
Complete Set	134-3603	\$175.00	134-3703	\$175.00
